

Periodic inspection keeps your machine healthy!

At Muratec, we want our customers to enjoy long and trouble-free use of our machinery. With that goal in mind, we offer various services to help optimize machine efficiency and build solid business relationships with our customers.

At this time, we introduce our Periodic Inspection and Maintenance Service at Murata Machinery (Shanghai) Co., Ltd. China.

Essential to equipment improvement and maintenance staff education

-Mr. Tetsushi Murakami, Director of Toray Jifa (Qingdao) Textile Co.,Ltd.

It has been almost three years since we started an operation in May 2006. The level of our employees is still growing, as is the history of the factory.

In contrast to this, our equipment is old and there were many breakdowns due to defective parts. Maintenance of the winder

Our expert parts sales and engineering service staff offer regular visits to the customers' factories to inspect Muratec machinery and alert the customer to worn or damaged parts. Our Periodic Inspection and Maintenance Service provide customers with peace of mind. Regular machine inspections reduce problems and leads to a high operation efficiency.

was a problem for us.

Since we signed up for a maintenance contract, problems with the equipment and textile fabric processes have become clear and because of this, they have been greatly improved. Our contract is to receive three visits a year. We follow-up on the findings of each visit, as well as determine the issues to be solved for the next visit. This strategy has been really helpful. In addition, because of the on-site advice from the Muratec service staff, the level of our maintenance staff has increased.

We plan to continue our contract as long as possible, in order to improve our equipment and maintenance staff education.

It helps to improve our on-site staff skills

-Mr. Yukimasa Tanimoto, Managing Director of Qingdao Nikke Textile Co.,Ltd

Even our old model No.7 series, which is often described as 'antique', is still in operation, thanks to a thorough maintenance regime conducted through strong ties with engineering service staff from Muratec Shanghai.

The twice-a-year regular inspection and technical assistance by Muratec Shanghai improve the on-site skills, and it is an important opportunity for us to improve even further our performance.

Enables us to learn what parts to focus on for maintenance

-Mr. Tomonori Yasuda, General Manager of Jiangyin Nikke Worsted Spinning Co.,Ltd.

No.7 series has many parts to adjust, and it was difficult to know where to focus when

conducting maintenance. However, because of the inspections, we have learned which parts to focus on when conducting maintenance, and now we are able to prioritize our parts purchases. Meanwhile, we did not conduct maintenance on No.21C series, since the installation.

Thanks to the advice of Muratec's Inspection and Maintenance team, we are better able to conduct regular maintenance now.
