Ram setting and operation mode is exclusive.
Additional settings are necessary to CAMPATH.
Ask your MML contact for details.

QUESTION & ANSWER

*Q: What is the difference between VULCAN and VULCAN II**?*

A: No shims, better nibbling, a longer service life and more.

NO SHIMS

The level of punch easily changeable - Just turn the tang. No shims are necessary.

BETTER NIBBLING

The misalignment of punch and die decreases. The punch holder and the punch is fixed by one single element, unlike the precedent which the two are held individually.

BETTER SERVICE LIFE

Through our test, VULCAN II lives 3.5 times longer than VULCAN. Plus VULCAN II has more margin to sharpen - 1.7 times!

SAFETY TOOL PUNCH HOLDER

VULCAN II --- Standard model is OK.

VULCAN --- Shall be a special shape dedicated to Safety Tool.

COMPATIBILITY

VULCAN D or smaller punches could be used in VULCAN II holders with a VULCAN to VULCAN II adapter.

**Note: VULCAN II is limited to MOTORUM, VECTRUM and M5000.
